

MACCENTO REAL ESTATE MEDIA

Maccento CRM User Manual

This manual explains how the Maccento website, CRM backend, client portal, AI assistants, sales workflow, invoicing, project tracking, media delivery, and communication tools work together. It is written as a practical operations guide for day-to-day use.

SYSTEM TYPE

AI-assisted CRM and client portal for real estate media operations.

PRIMARY USERS

Owner, admin, manager, photographer, editor, client, and agent accounts.

MAIN GOAL

Move leads from inquiry to quote, project, invoice, delivery, and client follow-up.

1. System Overview

Maccento CRM is a single operating system for website lead capture, internal sales pipeline management, project tracking, invoice control, media delivery, email communication, and client self-service.

Core Business Purpose

- Capture new inquiries from the public website.
- Convert qualified inquiries into quotes and projects.
- Track operational work from accepted to complete.
- Control invoice status and project delivery eligibility.
- Give clients a clean portal for quotes, invoices, requests, and downloads.

Main Product Areas

- Public website and AI assistant.
- Lead capture and quote pipeline.
- Project workspace and media delivery.
- Email Center and SendGrid-connected communication.
- Client management and user portal.

Layer	What It Does	Who Uses It
Website	Shows services, package builder, contact form, and public AI assistant.	Prospects, clients, agents, marketers.
Admin CRM	Manages leads, quotes, invoices, projects, email, delivery, users, and settings.	Owner, admin, manager, delivery team roles.
Client Portal	Lets clients review quotes, invoices, projects, downloads, and service requests.	Client, user, and agent roles.

2. Public Website Features

2.1 Public Entry Points

- Home page marketing sections and service descriptions.
- Public AI assistant for service, package, and booking questions.
- Package builder for preset and custom service combinations.
- Contact form for direct inquiry submission.

2.2 Services Presented Publicly

Professional Photography (HDR)

Cinematic Property Films

Express Video Walkthroughs

Drone Photography & Video

Virtual Staging

Day-to-Dusk Edits

3D Tours

Floor Plans

Social Media Content

Photo Retouching

2.3 Website Lead Sources

Source	How It Works	CRM Result
Public AI Assistant	Visitors ask questions about services, pricing ranges, booking, and recommendations.	Conversation and lead context can be captured into CRM workflow.
Package Builder	Visitors select preset or custom services and build a quote-style request.	Quote/lead context is stored for admin follow-up.
Contact Form	Visitors submit direct inquiry details, including multiple selected services.	Website form submission and lead record enter the CRM.

The public assistant is intentionally grounded to Maccento services, service area, booking flow, delivery timing, and recommendation logic. For cancellation, refund, or custom payment-term questions, it should direct visitors to contact the team at info@maccento.ca or (514) 951-9141.

3. Authentication and Roles

3.1 Login and Signup

- Users access the system through the login page.
- The signup page can create the first account when no user exists.
- The first registered account becomes the first admin account.
- After login, internal roles are routed to the admin dashboard and client-facing roles are routed to the user dashboard.

3.2 Role Model

Role	Main Access Scope	Typical Use
Owner	Full system access, including users and high-level settings.	Business control, operations, configuration, approvals.
Admin	Full daily CRM operations.	Sales, quotes, invoices, projects, email center, delivery.
Manager	Broad operations without owner-only user administration.	Pipeline supervision, delivery coordination, billing follow-up.
Photographer	Delivery-focused access.	Project visibility, media delivery, preview, operational context.
Editor	Delivery-focused access similar to photographer.	Media handling, delivery progress, project media review.
Client / User / Agent	Portal-only access to their own records.	Quotes, invoices, downloads, service requests, project view.

4. Admin CRM Modules

4.1 Dashboard

- High-level operating summary for leads, projects, invoices, client activity, and notifications.
- Acts as the internal landing page for admins and managers.

- Supports real-time orientation through the admin assistant and notification center.

4.2 Lead Management

Lead Management is the first operational layer after website capture.

- **All Leads:** Complete lead list with filtering and scoring.
- **Leads from AI Assistance:** AI-originated inquiry focus.
- **Leads from Packages:** Package-builder and pricing-flow leads.
- **Website Submissions:** Direct website form submissions.
- Lead records include status control, notes, follow-ups, and email actions.

4.3 Quote Pipeline

- Manual quote creation and review of website/package quote activity.
- Quote statuses include new, reviewed, contacted, booked, and lost.
- Custom quotes support line-item adjustment and total recalculation.
- Preset fixed package quotes are not intended for manual line-item editing.
- Quote emails can be resent from the admin side.
- Client portal users can submit revision requests back to the team.

4.4 Invoices

- Create invoices from client and project contexts.
- Update invoice status through draft, sent, partial, paid, and overdue.
- Generate downloadable invoice PDFs for admin and clients.
- Invoice settings support tax inclusion and tax rate configuration.

4.5 Projects

- Primary operational workspace for active client work.
- Project statuses include accepted, shooting, editing, and complete.
- Projects link to clients, invoices, media, and service requests.
- Admin users can open client and project contexts directly from project rows.

4.6 Media Delivery

- Upload gallery media for a project.
- Upload final delivery ZIP files.
- Preview project media inside the admin panel.
- Track payment gate context before delivery is opened to clients.
- Manage watermark settings and rebuild behavior where permitted.

4.7 Clients

- Create and manage client records.
- Open a full client workspace with projects, invoices, requests, and messages.
- Switch between all-project view and single-project mode.
- Use the client page as the central account record for account-level operations.

4.8 Email Center

- Unified inbox for inbound replies.
- Sent mailbox with provider event timeline.
- Draft mailbox with autosave and one-click send.
- Compose email modal with AI-assisted writing and file attachments.
- Automation settings and backfill actions for lead follow-up workflow.

4.9 Users

- Internal user account management is reserved for high-permission roles.
- Used to create, review, and remove internal CRM accounts.

5. Client Workspace and Portal

5.1 Client Dashboard

The client dashboard is the customer-facing workspace after login.

- Lead visibility for client-owned inquiries.
- Quote listing with direct open action.
- Request New Service form.
- Project list with detailed popup view.
- Invoice downloads and project-linked invoice visibility.
- Media preview, media download, and final ZIP download when eligible.

5.2 Client Project Experience

- Each project can show status, schedule, invoices, timeline, and related service requests.
- Clients can submit additional service requests linked to a project.
- Project downloads are controlled by payment state.

5.3 Client Service Requests

Service requests are the client-side request-and-follow-up mechanism.

- Clients can request new work from their dashboard or from a project context.

- Service request statuses include new, accepted, in_progress, completed, and closed.
- Admins can review and update these requests from the CRM.

6. AI Assistants

Public AI Assistant

- Answers service, package, booking, and recommendation questions.
- Uses company service knowledge, package guidance, and delivery expectations.
- Should not invent custom pricing or unsupported policies.
- For policy questions outside configured rules, it directs visitors to email or call the team.

Admin Assistant

- Available across the admin panel as an internal operations helper.
- Answers practical CRM workflow and navigation questions.
- Uses role-aware and module-aware CRM knowledge.
- Does not claim to have changed records or completed actions.

Assistant	Audience	Primary Topics
Website Assistant	Prospects and clients	Services, package direction, booking, delivery timing, next step guidance.
Admin Assistant	Internal staff	CRM workflows, invoices, projects, clients, media delivery, lead operations, email center.

7. Email Center and Communication Workflow

7.1 Email Center Functions

- Inbox stores inbound replies parsed into the CRM.
- Sent view shows outbound emails and provider event tracking.
- Drafts support autosave, edit, manual save, send, and delete.
- AI draft writing helps generate first-pass outbound emails.
- Compose email supports direct recipient routing, reply-to, CC, BCC, project tagging, and attachments.

7.2 SendGrid Integration

- Outbound messages create email logs for CRM tracking.

- SendGrid webhook events can update delivery/provider timeline visibility.
- Inbound replies can be parsed into inbox records and linked to client/project context.
- Project thread tags support more reliable email-thread mapping.

7.3 Compose Attachments

- Admins can attach up to 5 files in compose.
- Each attachment supports up to 10 MB.
- Attachments are sent with the outbound email but are not stored in drafts.

8. Media Delivery and Payment Rules

8.1 Delivery Workspace

- Gallery upload area for images and videos.
- Final ZIP upload area for client-ready delivery package.
- Media preview actions for internal users.
- Delivery state visibility from client and project views.

8.2 Watermark Logic

- Watermark settings exist for authorized roles only.
- Rebuild actions apply to preview/media workflow where configured.
- Watermark controls are not intended as a replacement for final paid delivery packaging.

8.3 Payment Gate

Client project downloads are locked until the related project is paid. This rule protects final delivery access and is one of the most important operational controls in the CRM.

9. Status Reference

Area	Statuses	Operational Meaning
Leads	new, qualified, contacted, won, lost, nurturing	Sales qualification and follow-up progression.
Quotes	new, reviewed, contacted, booked, lost	Proposal stage and conversion tracking.
Projects	accepted, shooting, editing, complete	Production and delivery workflow.

Area	Statuses	Operational Meaning
Invoices	draft, sent, partial, paid, overdue	Billing and collection state.
Service Requests	new, accepted, in_progress, completed, closed	Client-request handling and resolution state.

10. Typical Operational Flow

1. A visitor uses the AI assistant, package builder, or contact form.
2. The system captures the inquiry into the CRM as a lead or submission source.
3. Admin reviews the lead, updates status, follows up, and may create a quote.
4. Once accepted, work progresses into a client and project context.
5. Invoices are created and tracked.
6. Media is uploaded and final delivery is prepared.
7. Once payment is complete, the client can access final media and ZIP downloads.

11. Operational Notes and Known Business Rules

- Primary on-site service area is Greater Montreal.
- Special locations can be discussed case by case.
- Typical turnaround: photos in 24-48 hours, video around 72 hours.
- Drone work depends on weather and safe flight conditions.
- The current CRM knowledge base does not define automatic late fees, cancellation policy, or refund policy.
- When those policy questions arise, staff should direct the client to the business team by phone or email for confirmation.

12. Troubleshooting Guide

Issue	Likely Cause	Recommended Check
Cannot log in	Empty user table, wrong active database, invalid credentials, or stale browser cookies.	Check user count, active DB connection, and clear browser cookies/session.
Client cannot download media	Invoice/project is not marked paid, or final delivery is not uploaded.	Review invoice status and project delivery files.

Issue	Likely Cause	Recommended Check
Inbound email not visible	SendGrid webhook/config issue, unmatched inbound parse, or message-body problem.	Check Email Center inbox, webhook route activity, and recent logs.
Attachment missing from sent email	Attachment not selected, validation size exceeded, or send failed before dispatch.	Review compose form selection, validation, and sent mailbox record.
Admin sees blocked action in UI	Role mismatch or outdated page state.	Confirm the user role and refresh the page after permission changes.

13. Feature Summary

Maccento CRM is not just a back-office admin panel. It is a full lead-to-delivery operating system with a public marketing front end, dual AI assistants, a quote and invoice pipeline, client portal functions, media delivery controls, and integrated email communication.

In day-to-day use, the system should be understood as a connected workflow: **website inquiry -> CRM review -> quote -> project -> invoice -> delivery -> client access.**

Prepared for Maccento project operations. Document saved from the project workspace as a user-manual style reference.
